### ABSTRACT

**Background:** Traditionally the health sciences students go through a structured curriculum spread over 5 years. The curriculum is heavy with factual information and also involves interaction with patients. The interaction with actual patients is restricted due to ethical considerations.

There are 120 studies done during year 2000 to 2019 to know the perceptions of health sciences students concerning their educational environment using different tools like DREEM, MEEM, PHEEM, STEEM. We have collected the study details using PubMed, Google Scholar databases and done systematic review focusing on DREEM Tool, Overall Score.

The participants are from medical schools across the globe. The total participants 35,679. The highest DREEM Score is 170 and Lowest 90 giving an Average of 119, The common student perceptions are Teachers are authoritarians, Over emphasis on Factual Learning, Limited Scope to put Fact into Practice.

**Conclusion:** In all these studies one common finding is global score  $121 \pm 15.33$  and over emphasis on factual learning Perhaps opportunities to be given for experiential learning as in 70:20:10 Personal Development Model. The patient care activities can be from “R (reception).....to.....RxR dash (prescription)”.

**Key words:** DREEM Tool, Overall Score, Over emphasis, Patient care

### INTRODUCTION

The educational environment (EE) is huge consisting of physical, mental, social,

spiritual, technological, cultural, geographical domains. It can take the shape in infinite variety imaginable. It is arranged, administered and controlled by the institution. The people who run the institution, their vision, mission, experience decides the scale and extent it is positioned with others in the context of contemporary ethos, competition. The EE satisfies physiological needs, safety needs, and social esteem and allow self-actualization of student's skills. Hence the EE has huge diversity across the globe. The EE is a place or platform for students to pursue their academic goals. The EE for students of health sciences is still unique, different, complex and challenging in view of patients. Hence there are strict stipulations to establish, run institutions to maintain certain desirable standards. [1]

There are 29 Low Income countries, 98 Middle Income countries and 68 High Income countries in our world. All of them need doctors, dentists, nurses, physiotherapists, paramedics to serve the health needs of their communities and accordingly designed their institutions to train the healthcare personnel. The EE may just consist of bare minimum set up like class rooms, facilities, faculty, patients, and hospital in some settings while there are others having highly advanced, fully equipped, technology driven multidisciplinary design skill labs. The EE rolls out the student product at the end of

the course, now this product is it industry fit? Industry fit anywhere/everywhere?? [2-3]

In the EE the students are a core component occupying Centre stage. The students are expected to actualize certain level of knowledge, attitude and skills during their study. They just obey their teachers and do not voice their concern! The students in general are gifted with wonderful god given eyes and ears watching all that happens around them. That is how they naturally learn, gain knowledge, become skillful. This fact is true to health sciences students too. At the end of the course students feel they are new, fresh to face real work challenge!!! Then in the hospital are the Consultants happy with “House Officer/ Junior Professional”, no not all!!! [4,5] These students pass through rigorous selection process, based on merit. Then medical education regulators often think of conducting “Common Exit Exam” to make students “Industry Fit”. Suppose the EE is structured with emphasis on “Patient Care Activities” from

Reception.....to..... **Rx** Prescribing remedy spread over from year one to final year of the study, the EE may be fantastic spring board for professional development. [6]

The institutional managers compete with one another to renew their EE, [7] the medical council regulators certify the EE with iron fists for compliance, in this situation how do students perceive their EE is the object of our study.

We have done literature review of studies concerning student’s perceptions from 1997 to 2018 using PubMed, Google Scholar databases. Equally good number of tools like- DREEM, MEEM,PHEEM, STEEM are available to collect student perceptions. For our review we have included only those studies:- that used DREEM tool, [8] that follow DREEM Guidelines for scoring, that worked out overall DREEM Score. When we applied these criteria, we got 86 studies.

**Table1. List of Studies using DREEM Tool to collect health sciences studentsperceptions.**

## RESULTS

Graph 1. Showing the distribution of Overall DREEM Score

Summary of DREEM	
Valid N	86.00
Minimum	90.00
Maximum	160.00
Mean	119.88
Median	119.00
SD	15.57
SE	1.68
Q1	110.00
Q3	126.00
Quartile range	16.00

*Text:* There are 120 studies collected through PubMed and Google Scholar and only 86 studies [Table 1.] fit into our inclusion criteria. These studies are listed in their chronological order. Saudi Arabia, Sri Lanka, India, Ireland, Kuwait, Malaysia, Chile, West Indies, UAE, New Zealand, Greece, Pakistan, Germany, Iran, Nigeria, UK, Spain, Africa, Morocco, Philippines, China, Korea, Bangladesh, Sudan, Australia, Sweden

The salient features of these studies are: The average overall DREEM Score is 119 (Range 90-170).[Graph 1]

There is over emphasis on factual learning. The teachers are dominant and knowledgeable.

The overall DREEM Score is good enough to measure the health of EE, a score of 119 is average rating, students have unmet needs to be satisfied. The EE is surely crucial for student's learning but learning too occurs while doing something,

along with peers and not necessarily with teachers. <sup>[9]</sup> How children pass through developmental stages like changing sides, able to sit, stand walk, talk are a testimonial for experiential learning. The DREEM Tool is easy and versatile tool to collect student perceptions suitable and found valid across the globe. In our review the distribution of "Overall DREEM Scores" takes near Normal Bell shape (Graph 1).

## CONCLUSION

The EE for health science students is just more positive than negative as per systematic review. The EE can be enriched with graded patient care activities in place of factual learning.

**Disclaimer:** The authors have their own individual contribution to this article. The data collection, data arrangement, Review of studies, article layout done by Dr. Amrita. study Conception, design, Monitoring article write up done by Dr. Sunkad, the data analysis, graphics by Dr. Javali and Study extraction, compilation, Summary by Ms. Shilpa. The authors have no conflicts; no competition or contradictory interests and they read and approved the final manuscript.
